# INSPECT
BY FLEET COMPLETE

The new DVIR mobile application
for driver reports

Fleet Complete®

Inspect by Fleet Complete

is a mobile application that allows drivers to complete their Driver Vehicle Inspection Reports (DVIR) to stay compliant with the government regulation. Using this app, drivers are able to easily perform pre/post-trip vehicle inspections, log any minor or major defects, and sign off on the report, providing fleet managers at the headoffice an instant status update.

Key Features

Greater efficiency during vehicle inspections

No paper trail

View of previous and current defects logged

Integration in Mechanic Portal

DVIR Solution

Inspect by Fleet Complete is designed to simplify vehicle inspection reporting and assist a driver with road safety compliance. The driver follows an easy-to-use checklist, makes remarks of any known defects, and provides a signature right in the app.

Reports completed by previous drivers for the same vehicle can also be accessed. All reports can be viewed immediately after their submission by supervising managers through the DVIR Web Portal for audit purposes.

Web Mechanic Portal

After the routine vehicle inspection is completed, defect logs are accessible on the Mechanic Portal. From there, a mechanic can select any vehicle from the list and view all the repairs needed and sign off straight in the portal when they are done. This will prompt a notification on the Inspect app, allowing the driver to keep or reject repairs.

Supported devices

Inspect by Fleet Complete can be easily downloaded from the Apple or GooglePlay stores. It runs on both Android and Apple smartphones and tablets.
