

# REMOTE SAFETY SOLUTION

With advanced GPS fleet tracking ensure the full visibility and safety of each member of your workforce, no matter the location.

# What is Remote Safety Solution?

Fleet tracker solution combined with Iridium Satellite, Duress and optional Driver ID creates a solution that operates outside network coverage to ensure the utmost safety for staff, vehicles and assets.

## Why Your Business Needs It

### Keep your workers safe

Remote areas lack visibility and workers can face serious hazards on the job and in the field, minimise dangers and respond faster if they are in trouble.

### Know what's happening in the field

No matter how remote the location you can view the location of your vehicles and their status on one interface, from a web platform or your mobile device.

### Configured to meet project compliance

Fleet Complete understands that different sites have different compliance and reporting needs. Remote Fleet Tracker is fully configurable to meet different site needs. We are proud suppliers of the Safer Together initiative.

## How does it work?

Fleet Complete's Iridium Satellite Module plugs directly into your Fleet Tracker device, to ensure that your vehicles are always within communication range, even when your fleet leaves cellular network coverage. This ensures that the vehicle is tracked and in communication at ALL times - anytime, anywhere. Whilst the Fleet Tracker will continue to collect all the data (even outside network coverage) it will not be reportable until you return to network coverage.

Iridium Satellite has default logging parameters including Ignition on and off, forced poll for a position of a vehicle, update periods whilst travelling of once an hour (which can be configured for more frequently) emergency trigger, which allows a driver to send a duress log through their duress button and finally in an accident situation when an accident level event is detected a duress log will also be sent.

## How does it improve safety?

### Visibility

Not all late arrivals represent an emergency but knowing exactly where your personnel are at any given time can be critical to worker safety.

### Man Down

Fleet Complete provides both dash mounted duress buttons and driver duress remote pendants that can be activated manually by the operator or automatically in the event of no movement being recorded, such as a heart attack or fall.

### Emergency Response

If an accident has occurred know exactly where to send emergency services if they fail to arrive at their destination.

### Driver ID

adds an added element of safety, know who is driving what vehicle and when. With employees often operating multiple vehicles it can be hard to know where each person is at any time, with Driver ID eliminate the uncertainties with each individual having their own ID.

## Why Fleet Complete?

Among a myriad of telematics providers, few have managed to forge the type of solution and partner ecosystem in the industry akin to Fleet Complete's. With its unique business model and one of the most comprehensive platforms for fleet, asset and mobile workforce management, Fleet Complete provides visibility and control over all of your assets and mobile workers on one single interface.

### NATIONAL COVERAGE

As a partner of Telstra, Australia's largest mobile network, our solution will work for 99.3% of the population. Iridium Satellite is available for connectivity outside cellular network range.

### SOLUTIONS TO MEET YOUR CHANGING NEEDS

With more than 400k subscribers across more than 12 vertical markets you can be assured the confidence of finding a scalable solution that is a perfect fit for your business.

### GLOBAL SUPPORT

As the World's fastest growing commercial connected vehicle/ fleet telematics business we have a passionate team in place locally backed with a global support network to help our customers THRIVE!

## Additional Solutions From Our Partners

### Fuel Tax Credits

The Fuel Tax Credit Calculation Service produces the most accurate fuel calculations available. The system automatically syncs real-time vehicle tracking data with advanced geo-position analysis for fast access to your fuel tax reports at any time.

### JESI Remote Worker Management Software

JESI's software manages and evaluates the risks of a remote workforce who operate in diverse geographical locations. The mobile technology enables real-time responses and rapid communication that support a reduction in the number of accidents, injuries and delays.

### Seeing Machines Guardian

Guardian delivers an intelligent driver safety solution that uses in-cab sensors to monitor the driver's levels of fatigue and distraction, in real time. With 24/7 monitoring and analytics services, this is a complete safety solution for commercial vehicles
