

# Fleet Complete Task Tracker

Improve business efficiency,  
meet changing priorities, and  
enhance customer service –  
right from your smartphone.

# Follow the action on the field

Task Tracker is an efficient mobile workforce tracking and dispatching solution. Using the Fleet Complete web platform, dispatchers can send activities to mobile workers based on their geographical position, availability and workload.

With the Task Tracker app, the mobile worker can, in turn, accept activities and update the dispatcher on their status in near real-time.

### Complete crew visibility

Locate crew members on a comprehensive map and see their availability at that moment.

### Activity time tracking

Track how long it takes to complete an assignment or a job for better allocation in the future.

### GPS location time stamp

Know where and when a mobile worker has updated an activity status to help you get the job done.

### Timecard

Keep your dispatcher informed on worker availability by allowing your crew to clock in, start break and clock out.

## Near real-time results

Keep track of your workforce no matter what the task at hand. Once you assign an activity to someone in your crew, the request is accepted by a team-member out on the road. They will see the address and the specific instructions that you can leave to assist with completing the job.

## Easy to use interface

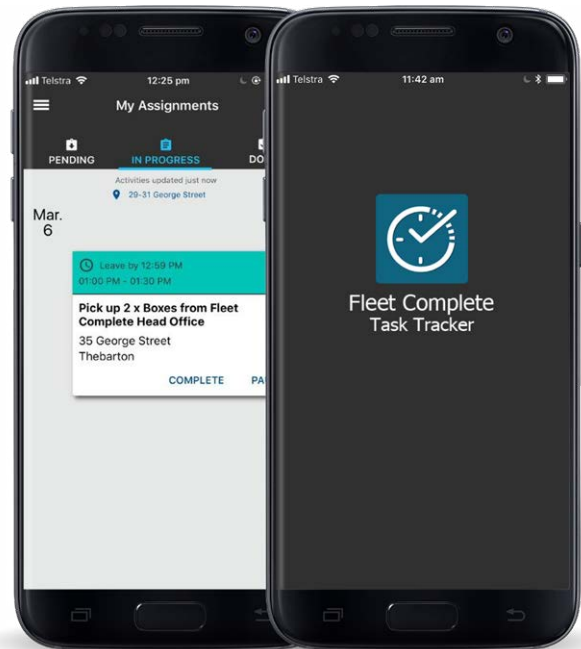

Helps you have complete visibility over your team with the intuitive controls on the Booking Screen. View the calendar to overview specific times and dates, and customise how you track your resources. You can view activities and filter requests by status defined as Open, Dispatched, Accepted, or Rejected.

## Tracking screen that keeps you in the know

Jobs that are close to completion or that have been rejected are flagged with an alert so you can take immediate action and stay on top of your resources.

## Supported devices

Our Task Tracker App can be purchased and downloaded from the iTunes or GooglePlay stores and installed on your devices. Task Tracker Mobile App runs on both Android and Apple smartphones and tablets.

Task Tracker is only available on the Fleet Complete Web platform. It is an add-on feature of FC Web at an additional charge. Telstra recommends the use of the Task Tracker mobile app for best use of the add-on, but this is not essential.
